1. Description

This memo details the steps to properly complete and file the MOE Waste Manifest when transporting hazardous waste in Ontario.

2. Objective

The objective of this memo is to clarify the requirements for BGIS O&M Solutions Inc. (“**O&M Solutions**”) and its contractors when manifesting waste that is being removed – from a Bell Canada or subsidiary site.

3. Scope

- This memo is for all waste transported from a Bell Canada or subsidiaries Ontario site;
- Examples of work that would require a waste manifest: cleaning the oil/water separators, cleaning floor drains, fuel tank clean out, transporting hazardous residual materials (ex: fluorescent lamps, mercury high pressure lamps, mercury relays, ODSs, PCBs, radioactive tubes and sodium lamps, etc), cleaning catch basins and storm sewers, cleaning inground hoist pits, etc.

4. Process to follow prior to work being conducted that will require the waste being removed from a site under a Waste Manifest:

- Contact O&M Solutions Environmental Services (ES) to request Waste Generator Number and the appropriate waste class assigned to the type of waste to be removed;
- ES will provide Waste Generator Number and appropriate waste class. The site has to be previously registered on HWIN. It is the responsibility of Bell CR&E to register and maintain HWIN registrations;
- Only a MOE licensed hauler may remove and transport hazardous waste. O&M Solutions must verify that only licensed contractors are used for this purpose;
- The waste hauler will complete the waste manifest. It is O&M Solutions responsibility, as agent acting on behalf of Bell and its subsidiaries, to ensure the manifest is completed appropriately (see section 5 below);
- The waste hauler will request a representative of the Generator (usually O&M Solutions or our designate) to complete and sign the consignor area of Section A. (refer to example manifest below);
- Once completed, the waste hauler will give copies 1 (white) and 2 (green) to the Generator representative (O&M Solutions or designate);
- O&M Solutions must mail copy 1 (white) to the MOE at the address identified on the waste manifest, and place copy 2 (green) in an environmental folder that must be maintain on site for 2 years.

5. Instructions to correctly fill the Waste Manifest:

- O&M Solutions is not the Generator of the waste. The Generator is the owner or tenant of the site, usually Bell Canada or subsidiary.
- The mailing address (section A) for the manifest is always:

**Bell Canada, Corporate Responsibility and Environment
671 de la Gauchetiere Ouest, 12th Floor
Montreal, Quebec
H3B 2M8**

- The Waste Manifest has 6 copies that must be routed according to the attached flow diagram (see below)
 - Copy #1 (white) must be mailed to the MOE by the Generator or its representative (i.e. BGIS O&M Solutions Inc.) at the address identified on the manifest;
 - The 2nd copy (green) must be maintained on site. It is suggested that an environmental (green) file in the O&M Solutions room be established at the facility to store the site copy of the manifest. The manifests must be maintained for a minimum period of 2 years.

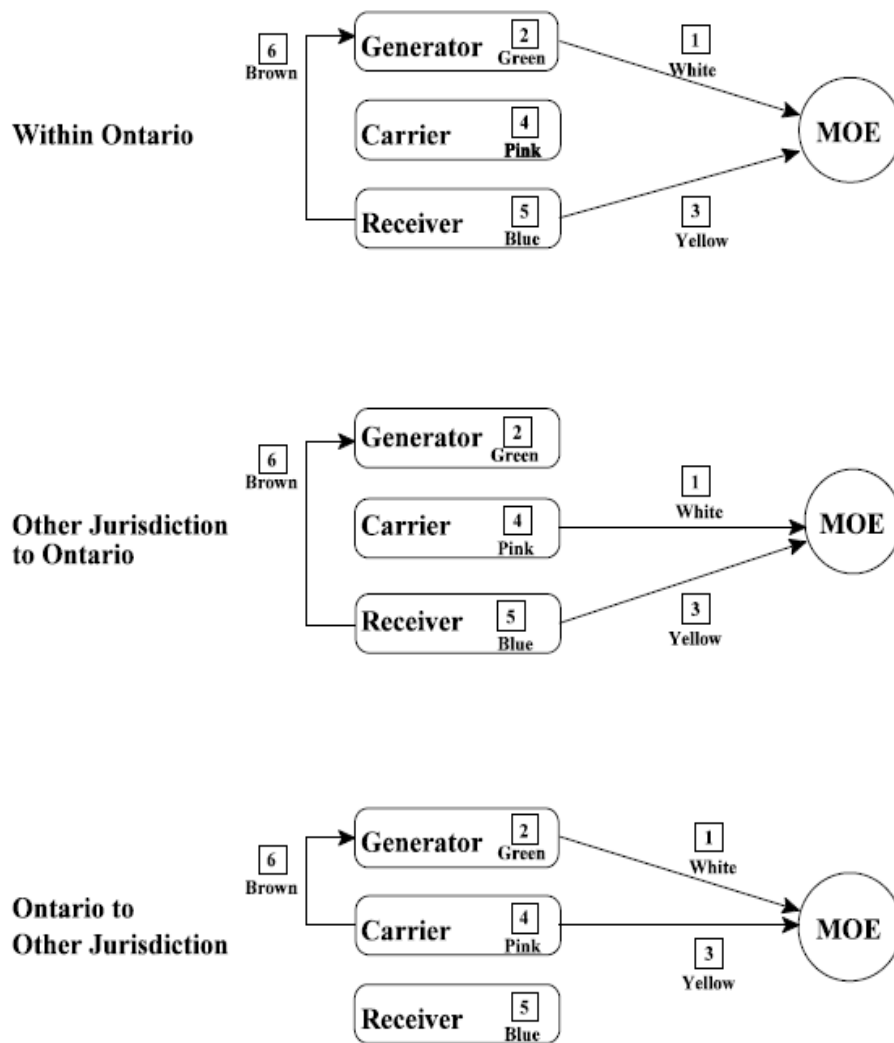

You may photocopy and retain a copy of the manifest in your office files but the original copies must be handled and maintained according to the MOE requirements.
 - The waste receiver will mail copy #6 (brown) to the mailing address identified in section A of the Waste Manifest, that being Bell Canada's CR&E;
 - The remaining copies accompany the waste in its journey to the waste disposal site. Each step in the transportation and disposal process is documented with the Waste Manifest.
 - The MOE receives two copies: one from the Receiver (yellow #3) and one from the Generator (white #1). The MOE has the option to follow up with audits.

If you need more information on HWIN Waste Manifest, please contact ES or visit the MOE HWIN web site at: <http://www.hwin.ca/hwin/index.jsp>
